

## RS-232/485/422 Serial Transceiver with Internal Termination and Wide Output Swing

### Description

The XR34350 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards in a 40-pin QFN package. Integrated cable termination and four configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. Full operation requires only four external charge pump capacitors.

The RS-485/RS-422 modes feature one driver and one receiver (1Tx/1Rx) in both half and full duplex configurations. The RS-232 mode (3Tx/5Rx) provides full support of all eight signals commonly used with the DB9 RS-232 connector. A dedicated diagnostic loopback mode is also provided.

The high speed drivers operate up to 20Mbps in RS-485/RS-422 modes, and up to 1Mbps in RS-232 mode. All drivers can be slew limited to 250kbps in any mode to minimize Electromagnetic Interference (EMI).

All transmitter outputs and receiver inputs feature robust Electrostatic Discharge (ESD) protection to  $\pm 15\text{kV}$  IEC-61000-4-2 air gap,  $\pm 8\text{kV}$  IEC-61000-4-2 contact, and  $\pm 15\text{kV}$  Human Body Model (HBM). Each receiver output has full fail-safe protection to avoid system lockup, oscillation, or indeterminate states by defaulting to logic-high output level when the inputs are open, shorted, or terminated but undriven. No external biasing resistors are required.

The RS-232 receiver inputs include a  $5\text{k}\Omega$  pull-down to ground. The RS-485/RS-422 receiver inputs are high impedance ( $>96\text{k}\Omega$  when termination is disabled), allowing up to 256 devices on a single communication bus (1/8th unit load).

The XR34350 operates from a single power supply, either 3.3V or 5V, with low idle current (2mA typical in all modes). The shutdown mode consumes less than  $10\mu\text{A}$  for low power standby operation.

### Typical Application

Figure 1. Typical Application

### FEATURES

- Rx enabled during Tx short-circuit condition
- Pin selectable cable termination
- No external resistors required for RS-485/RS-422 termination and biasing
- 3.3V or 5V single supply operation
- Robust ESD protection on bus pins
  - $\pm 15\text{kV}$  IEC 61000-4-2 (air gap)
  - $\pm 8\text{kV}$  IEC 61000-4-2 (contact)
  - $\pm 15\text{kV}$  (HBM)
- Max data rate of 20Mbps in RS-485/RS-422 modes and up to 1Mbps in RS-232 modes
- Pin selectable 250kbps slew limiting
- 3 drivers, 5 receivers RS-232/V.28
- 1 driver, 1 receiver RS-485/RS-422
- High swing RS-232 driver outputs ( $\pm 10.0\text{V}$  no load)
  - Full and half duplex configuration
  - 1/8th unit load, up to 256 receivers on bus
- RS-485/RS-422 enhanced failsafe for open, shorted, or terminated but idle inputs
- Space saving 40-pin 6mm x 6mm QFN package
- Pin compatible with SP339E and SP338E

### APPLICATIONS

- Dual protocol serial ports (RS-232 or RS-485/RS-422)
- Industrial and process control equipment
- Point-of-sale equipment
- HVAC controls equipment
- Building security and automation equipment

## Absolute Maximum Ratings

Stresses beyond the limits listed below may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Supply voltage $V_{CC}$ .....	-0.3V to 6.0V
Receiver input voltage (from ground) .....	$\pm 18$ V
Driver output voltage (from ground).....	$\pm 18$ V
Short-circuit duration, Tx out to ground .....	Continuous
Voltage at TTL input pins.....	-0.3V to ( $V_{CC} + 0.5$ V)
Storage temperature range .....	-65°C to 150°C
Lead temperature (soldering 10 seconds).....	300°C
Power dissipation 40-pin QFN (derate 17mW/°C above 70°C) .....	500mW

## Operating Conditions

Supply voltage $V_{CC}$ .....	3.135V to 5.25V
Operating temperature range .....	-40° to 85°C

## ESD Ratings

Human Body Model (HBM), Tx and Rx pins.....	$\pm 15$ kV
Human Body Model (HBM), all other pins .....	$\pm 4$ kV
IEC 61000-4-2 (contact), Tx and Rx pins .....	$\pm 8$ kV
IEC 61000-4-2 (air gap), Tx and Rx pins.....	$\pm 15$ kV

## Electrical Characteristics

Unless otherwise noted:  $V_{CC} = 3.3V \pm 5\%$  or  $5.0V \pm 5\%$ ,  $C1$  to  $C4 = 0.1\mu F$ ;  $T_A = T_{MIN}$  to  $T_{MAX}$ . Typical values are at  $V_{CC} = 3.3V$ ,  $T_A = 25^\circ C$ .

Symbol	Parameter	Conditions	Min	Typ	Max	Units
DC Characteristics						
$I_{CC}$	Supply current, RS-232	No load, idle inputs		2	8	mA

## Applications Information

### Product Summary

The XR34350 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards in a 40-pin QFN package. Integrated cable termination and four configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. The RS-485/RS-422 modes feature one driver and one receiver (1TX/1RX) in both half and full duplex configurations. The RS-232 mode (3TX/5RX) provides full support of all eight signals commonly used with the DB9 RS-232 connector. A dedicated mode is also available for diagnostic loopback testing.

### Internally Switched Cable Termination

Enabling and disabling the RS-485/RS-422 termination resistor is one of the largest challenges system designers face when sharing a single connector or pair of lines across multiple serial protocols. A termination resistor may be necessary for accurate RS-485/RS-422 communication, but must be removed when the lines are used for RS-232. XR34350 provides an elegant solution to this problem by integrating the termination resistor and switching control, and allowing it to be switched in and out of the circuit with a single pin. No external switching components are required.

### Enhanced Failsafe

Ordinary RS-485 differential receivers will be in an indeterminate state whenever the data bus is not being actively driven. The enhanced failsafe feature of the XR34350 guarantees a logic-high receiver output when the receiver inputs are open, shorted, or terminated but idle/undriven. The enhanced failsafe interprets 0V differential as a logic high with a minimum 50mV noise margin, while maintaining compliance with the EIA/TIA-485 standard of  $\pm 200\text{mV}$ . No external biasing resistors are required, further easing the usage of multiple protocols over a single connector.

### $\pm 15\text{kV}$ ESD Protection

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The bus pins (driver outputs and receiver inputs) have extra protection structures, which have been tested up to  $\pm 15\text{kV}$  without damage. These structures withstand high ESD in all states: normal operation, shutdown and powered down.

ESD protection is tested in various ways. Exar uses the following methods to qualify the protection structures designed into XR34350:

- $\pm 15\text{kV}$  using the Human Body Model (HBM)
- $\pm 8\text{kV}$  using IEC 61000-4-2 Contact Discharge
- $\pm 15\text{kV}$  using IEC 61000-4-2 Air Gap Discharge

The IEC 61000-4-2 standard is more rigorous than HBM, resulting in lower voltage levels compared with HBM for the same level of ESD protection. Because IEC 61000-4-2 specifies a lower series resistance, the peak current is higher than HBM. The XR34350 has passed both HBM and IEC 61000-4-2 testing without damage.

### Diagnostic Loopback Mode

The XR34350 includes a diagnostic digital loop back mode for system testing as shown in [Figure 2](#). The loopback mode connects the TTL driver inputs to the TTL receiver outputs, bypassing the analog driver and receiver circuitry. The analog/bus pins are internally disconnected in this mode.

Exar Corporation reserves the right to make changes to the products contained in this publication in order to improve design, performance or reliability. Exar Corporation conveys no license under any patent or other right and makes no representation that the circuits are free of patent infringement. While the information in this publication has been carefully checked, no responsibility, however, is assumed for inaccuracies.

Exar Corporation does not recommend the use of any of its products in life support applications where the failure or malfunction of the product can reasonably be expected to cause failure of the life support system or to significantly affect its safety or effectiveness. Products are not authorized for use in such applications unless Exar Corporation receives, in writing, assurances to its satisfaction that: (a) the risk of injury or damage has been minimized; (b) the user assumes all such risks; (c) potential liability of Exar Corporation is adequately protected under the circumstances.

Reproduction, in part or whole, without the prior written consent of Exar Corporation is prohibited. Exar, XR and the XR logo are registered trademarks of Exar Corporation. All other trademarks are the property of their respective owners.
