

DATA SHEET

SKY85402-11: High-Power (+22 dBm) 802.11ac WLAN Power Amplifier with Integrated Power Detector

Applications

- IEEE 802.11ac WLAN enabled:
 - Access points
 - Media gateways
 - Set-top boxes
 - LCD TVs
- Other broadband triple-play multimedia applications

Features

- Linear output power for IEEE 802.11ac 256-QAM, EVM < 1.8% = +22 dBm @ 5.0 V
- High gain: 32 dB
- Power shutdown mode
- Superior gain flatness
- Fully matched at RF input/output ports
- Load insensitive power detector
- Small footprint QFN (20-pin, 4 x 4 mm) SMT package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. SKY85402-11 Block Diagram

Description

Skyworks SKY85402-11 is a 5 GHz Microwave Monolithic Integrated Circuit (MMIC) power amplifier (PA) with superior output power, linearity, and efficiency. These features make the SKY85402-11 ideal for wireless local area network (WLAN IEEE 802.11ac) applications.

The device is fabricated using SiGe BiCMOS technology. The device is internally matched and mounted in a 20-pin, 4 x 4 mm Quad Flat No-Lead (QFN) surface-mount technology (SMT) package, which allows for a highly manufacturable low cost solution.

A block diagram of the SKY85402-11 is shown in Figure 1. The device package and pinout are shown in Figure 2. Signal pin assignments and functional pin descriptions are described in Table 1.

Figure 2. SKY85402-11 Pinout (Top View)

Table 1. SKY85402-11 Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	N/U	Not used; open circuit	11	GND	Ground
2	GND	Ground	12	GND	Ground
3	RF_IN	RF input	13	RF_OUT	Power amplifier RF output
4	GND	Ground	14	GND	Ground
5	PA_EN	PA enable	15	GND	Ground
6	N/U	Not used; open circuit	16	GND	Ground
7	N/U	Not used; open circuit	17	GND	Ground
8	N/U	Not used; open circuit	18	VCC3	Third stage supply voltage
9	VCC3	Third stage supply voltage	19	VCC2	Second stage supply voltage
10	VDET	Analog power detector output	20	VCC1	First stage supply voltage

Technical Description

The SKY85402-11 PA contains all of the needed RF matching and DC biasing circuits. The device also provides an output power detector voltage.

The SKY85402-11 is a three-stage, SiGe BiCMOS device optimized for high linearity and power efficiency. These features make the device suitable for wideband digital applications, where PA linearity and power consumption are of critical importance (for example, WiFi systems or WLANs).

The device has been characterized with the highest specified data rates for IEEE802.11ac (256 QAM). Under these stringent test conditions, the device exhibits excellent spectral purity and power efficiency.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY85402-11 are provided in Table 2. Recommended operating conditions are specified in Table 3. Electrical specifications are provided in Tables 4, 5, and 6.

Typical performance characteristics of the SKY85402-11 are illustrated in Figures 3 through 9.

Table 2. SKY85402-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	VCC1, VCC2, VCC3	-0.3	+5.5	V
Enable voltage	PA_EN	-0.3	+3.6	V
RF input power	P _{IN}		+12	dBm
Operating temperature	T _{OP}	-40	+85	°C
Storage temperature	T _{ST}	-40	+150	°C
Junction temperature	T _J		+160	°C
Thermal resistance	Θ _{JC}		14.9	°C/W
Electrostatic discharge: Human Body Model (HBM), Class 1C			1000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

Table 3. SKY85402-11 Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage	VCC1, VCC2, VCC3	3.0	5.00	5.25	V
Enable voltage	PA_EN	1.8		3.6	V
Case operating temperature	T _{OP}	-40	+25	+85	°C

Table 4. SKY85402-11 Electrical Specifications: DC Characteristics¹

(VCC1 = VCC2 = VCC3 = 5.0 V, PA_EN = 3.3 V, T_{OP} = +25 °C as Measured on the Evaluation Board, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Supply current	I _{CC}	802.11ac:				
		P _{OUT} = +22 dBm, MCS9, 5 V		450	495	mA
		P _{OUT} = +25 dBm, MCS7, 5 V		560	615	mA
		PA_EN = 0 V, No RF		20	100	μA
Quiescent current	I _{CQ}	No RF		335		mA
Enable voltage:	PAEN_H PAEN_L		High	1.8	3.6	V
			Low	0	0.5	V
Enable current	I _{EN}			150	200	μA

¹ Performance is guaranteed only under the conditions listed in this table.

Table 5. SKY85402-11 Electrical Specifications: General¹
(VCC1 = VCC2 = VCC3 = 5.0 V, PA_EN = 3.3 V, TOP = +25 °C, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Frequency range	f		5.15		5.85	GHz
Output power	P _{OUT}	802.11ac, MCS9, -35 dB DEVM, HT80, 5 V	+20.5	+22		dBm
		802.11n, MCS7, -30 dB DEVM, HT40, 5 V	+23	+25		dBm
		MCS0, 5 V, HT20, mask compliant	+26	+27.5		dBm
1 dB output compression point	OP1dB	P _{IN} = CW	+28	+29		dBm
Small signal gain	IS21I		30	32	36	dB
Input return loss	IS11I		8	14		dB
Gain variation over band	Δ S21			±1.5		dB
2 nd and 3 rd harmonics	2fo, 3fo	P _{OUT} = +23 dBm		-50	-45	dBm/MHz
Rise and fall time	t _r , t _f			0.5		μs
Stability		P _{OUT} = +28 dBm, VSWR = 6:1, all phases	All non-harmonically related outputs < -50 dBm/MHz			-
Ruggedness	R _u	P _{IN} = +10 dBm, VSWR = 6:1, all phases	No damage			-

¹ Performance is guaranteed only under the conditions listed in this table.

Table 6. SKY85402-11 Electrical Specifications: Power Detector Characteristics¹
(VCC = 5.0 V, PA_EN = 3.3 V, TOP = +25 °C, f = 5.4 GHz, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Output power detector range	PDR		0		OP1dB	dBm
Detector voltage	VDET	P _{OUT} = +28 dBm		0.85		V
		P _{OUT} = +25 dBm		0.65		V
		P _{OUT} = No RF		0.30		V
Detector accuracy	ERRDET	ΔP _{OUT} @ constant VDET, +25 dBm: 5.15 GHz to 5.32 GHz, 0.65 V 5.32 GHz to 5.70 GHz, 0.66 V 5.70 GHz to 5.85 GHz, 0.88 V Detection variation at VSWR = 3:1	-0.5		+0.5	dB
			-0.5		+0.5	dB
			-0.5		+0.5	dB
				±1.5		dB
Output impedance	PDZ _{OUT}			2		kΩ
DC load impedance	PDZ _{LOAD}			26.5		kΩ

¹ Performance is guaranteed only under the conditions listed in this table.

Evaluation Board Description

The SKY85402-11 Evaluation Board is used to test the performance of the SKY85402-11 WLAN PA. A schematic diagram of the SKY85402-11 Evaluation Board is shown in Figure 10. A photograph of the Evaluation Board is shown in Figure 11. Component values for the SKY85402-11 Evaluation Board are listed in Table 7.

Evaluation Board Setup Procedure

1. Connect system ground to pin 2 of connector J6.
2. Apply 5.0 V to pin 7 of connector J6.
3. By applying 3.3 V on PA_EN (pin 6 of the J5 header), the PA is enabled. By placing a ground on PA_EN, the PA is disabled and placed in a shutdown state, drawing minimal current.
4. The 5 GHz amplifier performance can be monitored by applying an RF signal to connector J2 (RF_IN). Monitor the output power on the RF_OUT port connector, J1.
5. Detector performance can be monitored on pin 4 of connector J5.

CAUTION: Do not overdrive the amplifier by applying too much RF on the device input. A suitable starting input power setting is -20 dBm.

Circuit Design Considerations

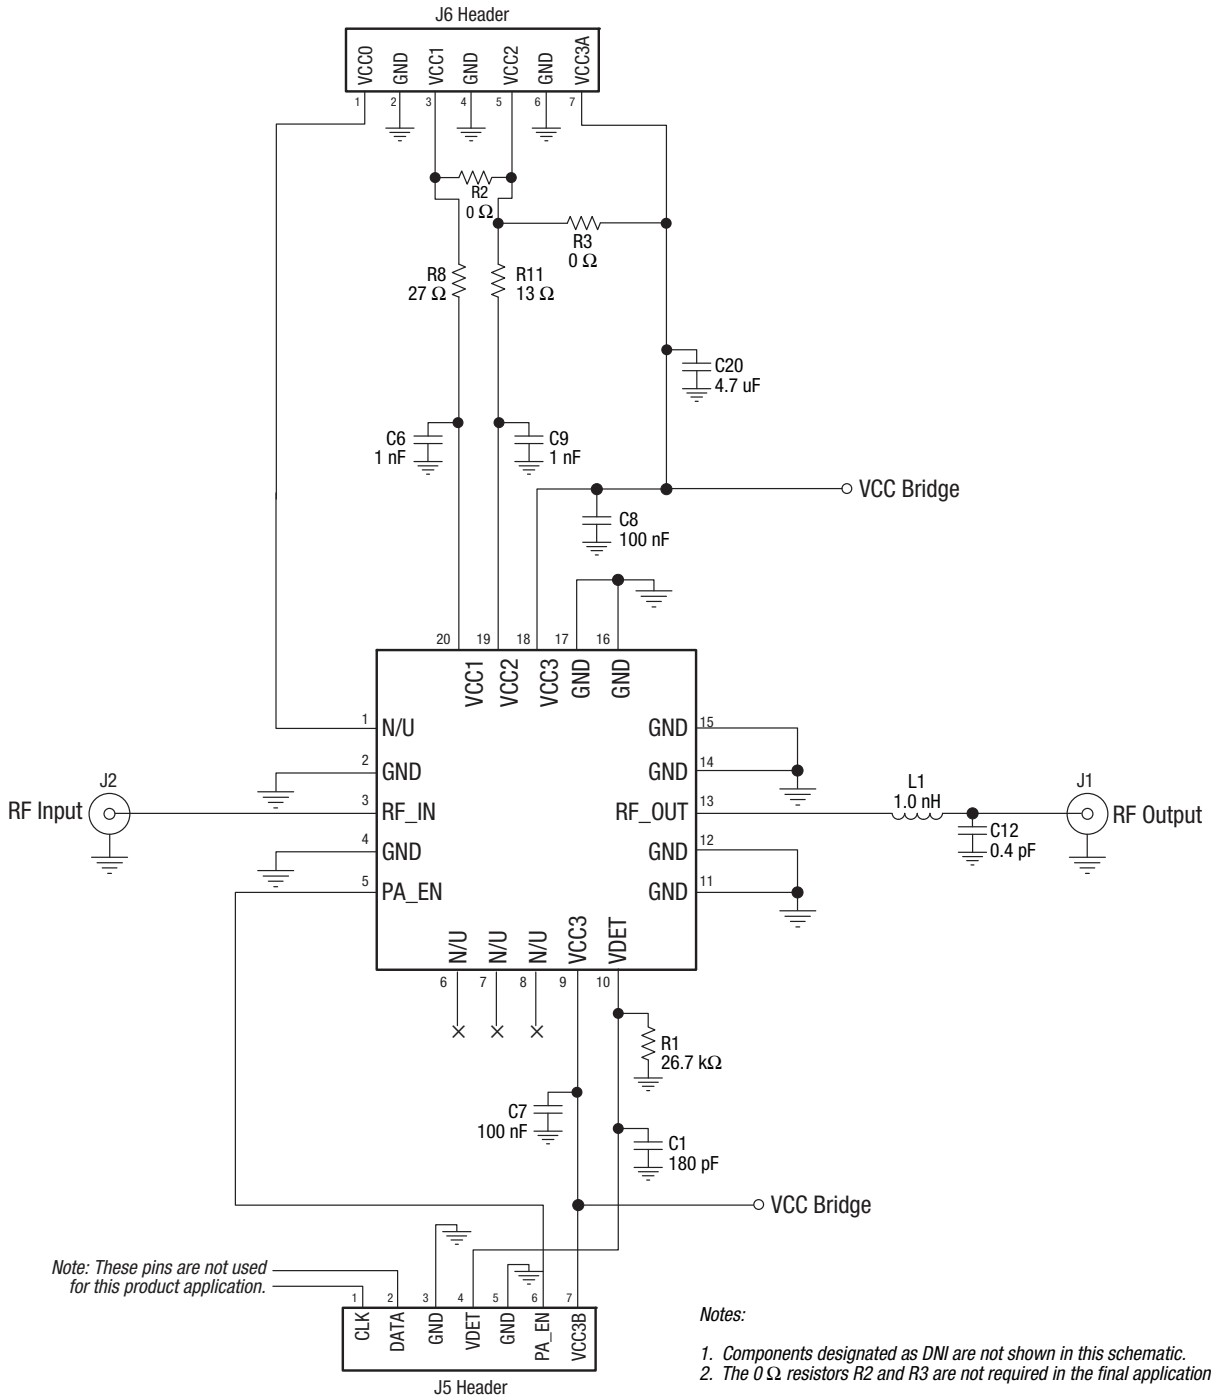

The following design considerations are general in nature and must be followed regardless of final use or configuration:

- Paths to ground should be made as short as possible.
- The ground pad of the SKY85402-11 has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the device.

Therefore, design the connection to the ground pad to dissipate the maximum wattage produced by the circuit board. Multiple vias to the grounding layer are required. For further information, refer to the Skyworks Application Note *PCB Design Guidelines for High Power Dissipation Packages*, document number 201211.

- Bypass capacitors should be used on the DC supply lines. Refer to the schematic drawing in Figure 10 for further details.
- The RF lines should be well separated from each other with solid ground in between traces to maximize input-to-output isolation.
- The RF_IN and RF_OUT ports are DC short to ground. These ports need to be DC blocked with general purpose 10 pF capacitors if there is DC present on the traces connecting to the ports.
- The RF_IN and RF_OUT trace losses measured from device pin to SMA connector are 0.2 dB each.

NOTE: A poor connection between the ground pad and ground increases junction temperature (T_j), which reduces the life of the device.

Package Dimensions

The PCB layout footprint for the SKY85402-11 is provided in Figure 12. Typical part markings are shown in Figure 13. Package dimensions are shown in Figure 14, and tape and reel dimensions are provided in Figure 15.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY85402-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Top View (Note 6)

Notes:

1. All dimensions are in millimeters.
2. Dimensions and tolerances in accordance with ASME Y14.5-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations: 30 to 35 μ m Cu via wall plating. Via holes should be tented with solder mask on the backside and filled with solder.
5. Stencil recommendations: 0.125 mm stencil thickness, laser cut apertures, trapezoidal walls, and rounded corners offer better paste release.
6. Solder mask recommendations: Contact board fabricator for recommended solder mask offset and tolerance.
